

SELECTION SORT:

Selection Sort is a simple sorting algorithm that repeatedly finds the smallest element from the unsorted part of the array and places it at the beginning. This process continues until the entire array is sorted.

ALGORITHM:

1. Start from the first element.
2. Assume the current element is the smallest.
3. Compare it with the remaining elements.
4. Find the smallest element in the unsorted part.
5. Swap it with the current element.
6. Repeat the process for all elements until the array is sorted.

Time Complexity:

Case	Time Complexity
Best Case	$O(n^2)$
Average Case	$O(n^2)$
Worst Case	$O(n^2)$

Space Complexity:

Space Complexity = $O(1)$

OUTPUT:

```
Enter the number of elements: 5
Enter the elements:
6
4
2
1
7
Sorted array:
1 2 4 6 7

...Program finished with exit code 0
Press ENTER to exit console.
```
