

LINEAR SEARCH:

Linear Search is a simple searching algorithm that checks each element in the array one by one until the required element is found or the end of the array is reached.

ALGORITHM:

1. Start from the first element of the array.
2. Compare the current element with the search key.
3. If both are equal, the element is found.
4. If they are not equal, move to the next element.
5. Repeat until the element is found or the end of the array is reached.
6. If the element is not found, display "Element not found."

Time Complexity:

Case	Time Complexity
Best Case	$O(1)$
Average Case	$O(n)$
Worst Case	$O(n)$

Space Complexity:

Space Complexity = $O(1)$

OUTPUT:

number is found

...Program finished with exit code 0

Press ENTER to exit console.
